Don’t just use AI to build your project.

Build a project that uses an agent.

Droid does work inside your running app, not just in your code editor. Use TypeScript or Python. Give it your tools and data, with you in control.

WHAT COULD YOU BUILD? A TRIP PLANNER THAT TAKES ACTION.

01	02	03	04
User asks	**Droid checks**	**App shows**	**User approves**
“Plan my day for under $30.”	Calls your tools to find options.	A proposed plan, with the costs.	Your app decides what happens next.

Scan. Run. Make it yours.

Start with the TypeScript guide, or choose Python. Run an example. Replace its tool with your idea.

docs.factory.com/sdk/typescript

BUILD SOMETHING REAL. ENTER THE FACTORY TRACK.

Best Use of the Factory Droid SDK

$2,000 cash + Factory credits + swag

Use the TypeScript or Python SDK meaningfully in your working product. Show what Droid does, and explain the integration in your README.

Prizes subject to change.
